

SYNOPSIS

- **Project Title-** Real-Time Chat application
- **Team-**
Batch-B5
 - Harsh Sharma- 2401030232
 - Karvy Singh- 2401030234
 - Rudra Kumar Singh- 2401030237
- **Brief-** The Desktop Chat Application is a client-server-based communication system developed in C++ that enables real-time messaging, file sharing, and image sharing between users. The application follows a structured approach using Object-Oriented Programming (OOP) principles, ensuring modularity, scalability, and maintainability. The primary goal of this project is to create a robust and efficient chat system tailored for desktop environments.

It comes with user authentication and a GUI for ease, with using concepts like abstraction, encapsulation, inheritance and polymorphism and SQL for data storage, its main features include networking, GUI Framework, DB management/ File Handling

- **Concepts Used-**
 - Virtual class/functions and Abstract Classes
 - Method overriding and overloading
 - Various types of inheritance
 - Class diagram and relationships
 - Aggregators and composition
 - Exception Handling
 - STL and data structures
 - SQL
